AMENDMENTS TO THE CLAIMS:

The listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF THE CLAIMS

- (Cancelled).
- (Currently Amended) The gel composition as claimed in claim 12, wherein the carbon nanotubes is-a are single-walled carbon nanotubes.
 - 3. (Cancelled).
- (Currently Amended) The method for producing the gel composition as claimed in claim 12 [[3]], the method by which it is formed further comprising a step of subjecting the product of the pulverization to centrifugal separation.
- 5. (Currently Amended) A method for using the gel composition of claim 12 eemprising a carbon nanotube and an ionic-liquid, which comprises the step of forming a desired shape from said gel composition by subjecting the composition in a fluidized state to application of an external force by a printing, coating, extrusion or injection operation, and then a step of removing the ionic liquid from said gel composition by bringing said shape in contact with a solvent capable of dissolving the ionic liquid or an absorbent capable of absorbing the ionic liquid.
 - (Cancelled).
 - (Cancelled).
- (Currently Amended) The gel composition as claimed in claim 12 [[6]], wherein the gel composition is capable of assuming a fluid state when an external force is applied.

- 9. (Currently Amended) A method for producing the gel composition of claim 12 [[6]] comprising a carbon nanotube and an ionic liquid, which comprises a step of pulverizing, in the presence of the ionic liquid, the carbon nanotube by applying a shearing force thereto.
- 10. (Previously Presented) The method for producing the gel composition as claimed in claim 9, further comprising a step of subjecting the product of the pulverization to centrifugal separation.

11. (Cancelled).

12. (Previously Presented) A gel composition formed by a method which comprises pulverizing carbon nanotubes by applying a shearing force to a mixture consisting of carbon nanotubes and an ionic liquid, wherein the ionic liquid is a salt which assumes a molten state at or very near room temperature.
